CSS

1. What is CSS?

CSS stands for **Cascading Style Sheets**. CSS is used to design and style HTML webpages.

HTML creates the structure of a webpage, while CSS controls colors, fonts, spacing, borders, layouts and visual effects.

```
p {  
  color: blue;  
  font-size: 20px;  
}
```

2. Why is CSS Used?

CSS makes webpages attractive, organized and easier to read. It controls colors, backgrounds, fonts, spacing, layouts and responsive design.

3. Advantages of CSS?

- Makes webpages attractive.
- Saves time by reusing styles.
- Separates design from HTML.
- Easy to maintain.
- Supports responsive websites.

4. Types of CSS?

Inline CSS: Written inside an HTML element.

```
<p style="color:red">Hello World</p>
```

Internal CSS: Written inside the <style> tag.

```
<style>  
p { color: blue; }  
</style>
```

External CSS: Written in a separate .css file.

```
<link rel="stylesheet" href="style.css">
```

5. CSS Syntax

CSS contains a selector, property and value.

```
p {  
  color: red;  
}
```

6. CSS Selectors

Element: p { } selects paragraph elements.

Class: .box { } selects elements with class='box'.

ID: #heading { } selects the element with a specific ID.

Universal: * { } selects all elements.

7. CSS Colors

Colors can use names, HEX, RGB or HSL.

```
h1 { color: red; }
p { color: #2963eb; }
```

8. CSS Backgrounds

Background properties set colors or images.

```
body {
  background-color: lightblue;
}
.box {
  background-image: url("image.jpg");
  background-size: cover;
}
```

9. CSS Borders

 Borders create an outline around an element.

```
div {
  border: 2px solid black;
  border-radius: 10px;
}
```

10. Margin

Margin is the space outside an element.

```
div { margin: 20px; }
```

11. Padding

Padding is the space between content and border.

```
div { padding: 20px; }
```

12. Height and Width

Height controls vertical size and width controls horizontal size.

```
div {
  width: 300px;
  height: 150px;
}
```

13. Text Properties

Common properties include color, text-align, text-decoration and line-height.

```
p {
  color: navy;
  text-align: center;
  text-decoration: underline;
}
```

14. Font Properties

Font properties control the appearance of text.

```
p {
  font-family: Arial;
  font-size: 16px;
  font-weight: bold;
}
```

15. CSS Links

Links can be styled using normal and hover states.

```
a { color: blue; }
a:hover { color: red; }
```

16. CSS Lists

Use list-style-type to change list markers.

```
ul { list-style-type: square; }
```

17. Display Property

Common values include block, inline, inline-block and none.

```
span { display: inline-block; }
```

18. Position Property

Common values are static, relative, absolute, fixed and sticky.

```
box {
  position: relative;
  top: 10px;
}
```

19. Flexbox – Basic

Flexbox arranges elements efficiently in rows or columns.

```
.container {
  display: flex;
  justify-content: center;
  align-items: center;
  gap: 20px;
}
```

20. Grid – Basic

CSS Grid creates rows and columns.

```
.container {
  display: grid;
  grid-template-columns: repeat(3, 1fr);
  gap: 20px;
}
```

21. Hover Effects

The `:hover` pseudo-class applies styles when the pointer is over an element.

```
button:hover {  
  transform: scale(1.05);  
}
```

22. CSS Buttons

Buttons can be styled with background, color, padding, border and radius.

```
button {  
  background: blue;  
  color: white;  
  padding: 10px 20px;  
  border: none;  
  border-radius: 8px;  
}
```

23. CSS Cards

Cards display information inside attractive boxes.

```
.card {  
  width: 250px;  
  padding: 20px;  
  border-radius: 15px;  
  box-shadow: 0 4px 12px #aaa;  
}
```

24. CSS Box Model

The box model contains content, padding, border and margin.

```
.box {  
  width: 200px;  
  padding: 20px;  
  border: 2px solid black;  
  margin: 20px;  
}
```

25. CSS Units

Common units are px, %, em, rem, vh and vw.

26. CSS Comments

Comments are ignored by the browser and help explain code.

```
/* CSS Comment */  
a { color: red; }
```

27. Basic CSS Project

Create a simple profile card using HTML and CSS.

```
<div class="card">
  <h2>My Profile</h2>
  <p>I am learning CSS.</p>
  <button>Learn More</button>
</div>

.card {
  width: 250px;
  padding: 20px;
  text-align: center;
  background: lightblue;
  border-radius: 15px;
}
```

28. Important Questions & Answers

Q1. What is CSS? CSS is used to style HTML webpages.

Q2. Full form of CSS? Cascading Style Sheets.

Q3. Types of CSS? Inline, Internal and External.

Q4. What is a selector? It identifies the HTML element to style.

Q5. Margin vs Padding? Margin is outside the border; padding is inside the border.

Q6. What is Flexbox? A CSS layout system used to arrange elements.

29. Practice Questions

1. Write the full form of CSS.
2. What is external CSS?
3. Change text color to red using CSS.
4. Difference between class and ID?
5. What is padding?
6. What is margin?
7. Create a rounded button.
8. What does display:flex do?
9. Explain the box model.
10. Write a hover effect.

30. Complete Basic CSS Example

Practice HTML and CSS together.

```
<!DOCTYPE html>
<html>
<head>
<style>
body {
  font-family: Arial;
  background: #eef6ff;
  text-align: center;
}
.card {
  width: 300px;
  margin: 30px auto;
  padding: 25px;
  background: white;
  border-radius: 15px;
  box-shadow: 0 5px 15px #bbb;
}
button {
  padding: 10px 20px;
  background: #2563eb;
  color: white;
  border: none;
  border-radius: 8px;
}
button:hover {
  transform: scale(1.05);
}
</style>
</head>
<body>
<div class="card">
  <h1>My CSS Page</h1>
  <p>I am learning CSS.</p>
  <button>Click Me</button>
</div>
</body>
</html>
```
